### a. MOTOR & MECHANISM SWITCHES LAYOUT

### b. FUNCTION

#### (1) OPEN/CLOSE

- (a) The rotation of the OPEN/CLOSE MOTOR rotates the OPEN/CLOSE IDLER GEAR via the BELT and PULLEY, and the RACK GEAR which is intermeshed with the OPEN/CLOSE IDLER GEAR moves forward during "OPEN", backwards during "CLOSE".

## CD CHANGER OPERATION DESCRIPTION

- The HOME POSITION is reached when the largest square hole in the UP/DOWN CAM GEAR (602) is between the SENSORS.

(b) Rotate the UP/DOWN CAM GEAR (602) counterclockwise (with OPEN/CLOSE during PLAY) or clockwise (with normal OPEN/CLOSE), raise the GEAR-BLOCK BRACKET, stop at the selected TRAY, hold the TRAY GUIDE by means of the OPEN/CLOSE RACK and save the other TRAY GUIDES.

(c) The OPEN/CLOSE motor starts running, the OPEN/CLOSE RACK moves forward, the TRAY LOCK LEVER is raised to lock the TRAY, and the OPEN operation commences.

## CD CHANGER OPERATION DESCRIPTION

- (d) When the TRAY closes and it reaches the tip of the RIB part of the LEFT TRAY GUIDE (589), the LOCK LEVER is lowered to release the TRAY, and loading proceeds.

### (2) LOADING

- (a) The rotation of the LOAD/UNLOAD MOTOR rotates the LOAD/UNLOAD DRIVE GEAR (552) in the clockwise direction.
- (b) The DRIVE GEAR and the gear portion of the TRAY mesh together and the TRAY moves backwards.

- (c) The completion of TRAY movement causes the UP/DOWN MOTOR to operate and lower the TRAY HOLDER (560), putting the unit to chucking status.

## CD CHANGER OPERATION DESCRIPTION

- (d) The rotation of the UP/DOWN MOTOR (624) rotates the UP/DOWN DRIVE GEAR (605) in the counter-clockwise direction. In connection with this, the TRAY HOLDER SLIDE (540) moves forward, and at the same time, the RIGHT SLIDE (575) is moved backwards by the SYNCRO LEVER (632).

- (3) Remove the three TRAYS through the gap at the back.

## CD CHANGER REPLACEMENT

### c. REPLACING THE TRAY GUIDE

- Have the LEFT TRAY GUIDE HOLDER and TRAY GUIDE ready before proceeding.

## CD MECHANISM ADJUSTMENTS

### c. CD MECHANISM

#### (a) Replacement of the spindle motor

- First, prepare the new turntable ( 701-1 ) and new special washer ( 701-4,701-5 ) for replacement.  
The removed turntable will be deformed by the heat of the soldering iron, and cannot be reused.
  - Prepare dial-type calipers.
- The attached bonding material can be dissolved by using a 60W soldering iron to heat the shaft at the upper part of the turntable for about one minute.
  - The turntable can then be removed from the shaft by very carefully applying force upward at the center of the lower surface of the turntable.
  - Remove the two screws ( 701-2 ) and remove the spindle motor (701-6).
  - Attach the special washer ( 701-4, 701-5 ) to the spindle motor.
  - Clean the spindle motor's shaft.  
To clean them, use a soft cloth soaked in isopropyl alcohol.
  - Apply a small amount of a mixture of the "Three Bond 2001" and "2015F" bonding materials to the motor's shaft.
  - Install the turntable as shown in the figure.
  - Secure the turntable by pressing gently.  
Be sure to wipe away (by using a piece of cloth, or similar material) any bonding material coming out of the hole.

#### (b) Replacing the pick-up

- Insert the pick-up rail ( 703 ) into the base chassis. ( 701-3 )
- If the latch of the base chassis ( 701-3 ) are missing when the pick-up rails have been installed, first wipe the tips of the rail with alcohol.
- After the pick-up has been replaced, apply grease (FLOIL G-474B) to the sections.
- The pick-up P.W.Board pattern is "shorted", as shown in the figure, so that the new pick-up will not be susceptible to the effects of static.
- Set the pattern to "open" after the pick-up has been replaced.

(BE SURE AT THIS TIME,  
NOT TO TOUCH ANY OTHER PART.)

## PARTS LIST

## PRODUCT SAFETY NOTICE

Each precaution in this manual should be followed during servicing. Components identified with the IEC symbol  in the parts list and the schematic diagram designate components in which safety can be of special significance. When replacing a component identified , use only the replacement parts designated, or parts with the same ratings of resistance, wattage or voltage that are designated in the parts list in this manual. Leakage-current or resistance measurements must be made to determine that exposed parts are acceptably insulated from the supply circuit before returning the product to the customer.

**CAUTION:** Regular type resistors and capacitors are not listed. To know those values, refer to the schematic diagram.

Regular type resistors are less than 1/4W carbon type and 0 ohm chip resistors.

Regular type capacitors are less than 50V and less than 1000 $\mu$ F type of Ceramic type and Electrical type.

**N.S.P** : Not available as service parts.
